Contacts (2 total)

Name	DMR ID	Type
group test 1	1	Private
test 1	12	Group

OpenGD77 CPS Usage Instructions

This backup contains CSV files compatible with the OpenGD77 Community Programming Software (CPS). You can edit your channel programming on a computer and re-import to your radio.

Download OpenGD77 CPS:

https://github.com/LibreDMR/OpenGD77/releases

Download the latest OpenGD77 CPS release for Windows, macOS, or Linux from the GitHub releases page.

How to Import Your Backup:

1. Transfer the backup folder from your phone to your computer
2. Open OpenGD77 CPS on your computer
3. Go to Menu > Import > Import CSV Files
4. Select the Channels.csv and Contacts.csv files from this backup
5. Edit channels, contacts, zones, and settings as needed
6. Export the modified CSV files
7. Transfer back to your phone and import using the DMR app

How to Re-Import to Your Phone:

1. Create a new folder in Download/DMR_Backups/ with timestamp format
2. Copy your edited CSV files to this folder
3. Open PriInterPhone app > LOCAL tab
4. Tap 'Import Channels' and select your backup folder
5. Confirm import - channels will be updated automatically

Important Notes:

- Importing will replace ALL existing channels in the app
- Contacts are preserved during channel import
- Backup your current settings before importing new ones
- CTCSS and DCS tone settings are fully supported
