OpenGD77 CPS Usage Instructions

This backup contains CSV files compatible with the OpenGD77 Community Programming Software (CPS). You can edit your channel programming on a computer and re-import to your radio.

Backup Contents:

- DMR_Backup_[timestamp].zip - Complete backup archive (recommended for transfer)
- Individual CSV files (Channels, Contacts, TG_Lists, Zones, DTMF)
- This PDF summary document

Download OpenGD77 CPS:

https://www.opengd77.com/downloads/PC_CPS/Latest/OpenGD77CPSInstaller_R2025.03.23.01.exe

Alternative download (GitHub-hosted backup):

https://github.com/IlMacGyverII/phonedmrapp/raw/main/OpenGD77CPSInstaller_R2025.03.23.01.exe

Download the Windows installer from the official website or use the GitHub backup. For other platforms (macOS, Linux), visit opengd77.com.

How to Import Your Backup:

1. Transfer the backup zip file or folder from your phone to your computer
2. Extract the zip file if needed, then open OpenGD77 CPS
3. Go to Menu > Import > Import CSV Files
4. Navigate to and select the backup folder - OpenGD77 will import all CSV files
5. Edit channels, contacts, zones, and settings as needed
6. Export the modified CSV files
7. Transfer back to your phone and import using the DMR app

IMPORTANT:
All 5 CSV files (Channels, Contacts, TG_Lists, Zones, DTMF) must be present in the folder for OpenGD77 to import successfully. Keep all files together.

How to Re-Import to Your Phone:

1. Create a new folder in Download/DMR_Backups/ with timestamp format
2. Copy your edited CSV files to this folder
3. Open PriInterPhone app > LOCAL tab
4. Tap 'Import Channels' and select your backup folder
5. Confirm import - channels will be updated automatically

Important Notes:

- Use the zip file for easy transfer via USB, email, or cloud storage
- Importing will replace ALL existing channels in the app
- Contacts are preserved during channel import
- Backup your current settings before importing new ones
- CTCSS and DCS tone settings are fully supported

Power & Squelch Conversion:

- Power levels: App Low=P1, App High=P9, Import P1-P4=Low, P5-P9/+W=High
